

Agriculture and Rangeland

Conservation, multiple use, and sustained yield management on over 46 million acres of trust Indian land

Burmese python captured on the Miccosukee Reservation, Florida.

Inventory
Inventory: Soil and vegetative survey data are used to support programmatic and lease/permit-level planning, land-use management decisions, and program review and development.

Invasive Species Management
Management and treatment of noxious weeds on trust rangelands as well as projects to address fish and wildlife invasives which are causing widespread negative impacts on ecosystems across Indian country.

Bindweeds

Cirsium Thistle

St. Johnswort

Farm and Range Planning and Protection
Integrated and Agricultural Resource Management plans for Tribal resources along with conservation planning for individual leases and permits. Trust agricultural lands are monitored for and action taken against insect and other pest outbreaks as well as unauthorized use (e.g., livestock trespass) of Indian lands.

Beef cattle production on Seminole rangelands, Florida

Leasing and Permitting Services
Determine proper use levels, best management practices and fair annual rental, and to address other management and regulatory aspects of leasing and/or permitting of range or agricultural lands.

Farm and Rangeland Improvements
Design, engineering, and implementation of cropland and rangeland improvements such as drainage systems, erosion control, fencing, and livestock water sources.

Forestry and Fire

Active Management and Protection of over 18 million acres of forests and woodlands

Forest Inventory and Planning

In order to prescribe treatments that help promote forest health and resilience to destructive agents such as insects, disease and fire, Foresters systematically collect inventory data throughout the forest to provide volume, species composition, and growth data. This enables them to model what the forest will look like in the future and plan treatments to move the forest toward a healthy, regulated condition.

Timber Sales

Timber sale is an essential tool to manage a forest properly. In many areas of the country, if forests are allowed to grow unchecked without treatment they will eventually be impacted by density-induced mortality from insects, disease, and fire. Not only are timber sales and thinning for the environment, they also provide revenue for the Tribes. Timber sale foresters prepare and administer timber sales.

Fire Management

Firefighting can be a rewarding career for those who don't mind sleeping on the ground and roughing it from time to time away from home. Fire Management Officers plan ways to not only suppress unwanted fires but also prescribe treatments in the forests using fire as a means to reduce thick underbrush and thin out excessive stocking.
